prenames

Dear Prenames customer,

With the enclosed document a GeoTrust QuickSSL Certificate can be requested to enable the security for that server with 128-bit encryption.

This certificate is linked to one domain name of your choice. This cannot be changed afterwards. Part of the certificate is also the Smart Seal which the client can publish on the secured web site. This way the visitor can test the certificate for its authenticity.

The costs for an SSL certificate are €39 a year.
The costs for a wildcard SSL certificate are €195,- per year.

With your request you need to generate and send a so called CSR key. You can find instructions on the following page:

<http://www.geotrust.com/quickssl/csr/index.htm>

You can send this key by email to info@prenames.com.

After the registration procedure you receive the certificate key which you which have to install on the server. You can find instructions on the following page:

<http://www.geotrusteurope.com/quickssl/install/index.htm>

You can fax or email this form (scanned as .tiff or .pdf) to us. Above you find the correct addresses. We will notify you as soon as the procedure is finished.

With kind regards,

Karim Lemraj
Prenames

Request form SSL Certificate

Hereby I request until denunciation a GeoTrust SSL certificate with 128-bit encryption for the following domain name. The costs are €39 a year.

Hereby I request until denunciation a GeoTrust Wildcard SSL certificate with 128-bit encryption for the following domain name. The costs are €195 a year.

- Conditions:**
- The domain name you enter is very important. When you fill in 'www.domainname.com', the certificate will only work for that particular domain and not under 'sub.domainname.com'. If you choose 'domainname.com' without a 'www' prefix, it doesn't automatically work for all sub domains.
 - The certificate and the domain name are fixed, it cannot be transferred to another domain.
 - The certificate will be automatically renewed for another year if no written denunciation has been received two months prior to the ending date.

The certificate will be attached to the following domain name: (please print clearly!)
